Why Beamer

- \LaTeX is widely used in academia for journal and conference papers

Microsoft [®] Word	\LaTeX
Word processor	Professional typesetting
Easy to learn, intuitive	Easy to start
WYSIWYG	What you think is what you get
Advanced features hard to master	Advanced features rarely needed
Long documents require experience	Same workflow for any length
Spend time on formatting	Focus on content
Equation typesetting is mediocre	Excellent equation typesetting
Binary format, compatibility issues	Text files, readable, stable
Paid commercial license	Free and open source

Math Examples

Unnumbered Equation

$$J(\theta) = \mathbb{E}_{\pi_\theta}[G_t] = \sum_{s \in \mathcal{S}} d^\pi(s) V^\pi(s) = \sum_{s \in \mathcal{S}} d^\pi(s) \sum_{a \in \mathcal{A}} \pi_\theta(a|s) Q^\pi(s, a)$$

Multi-line Equation¹

$$\begin{aligned} Q_{\text{target}} &= r + \gamma Q^\pi(s', \pi_\theta(s') + \epsilon) \\ \epsilon &\sim \text{clip}(\mathcal{N}(0, \sigma), -c, c) \end{aligned} \tag{1}$$

¹If text appears in equations, use `\mathrm{}` or `\text{}`, otherwise it looks like *clip* instead of clip.

Numbered Multi-line Equation

$$\begin{aligned} A = \lim_{n \rightarrow \infty} \Delta x & \left(a^2 + \left(a^2 + 2a\Delta x + (\Delta x)^2 \right) \right. \\ & + \left(a^2 + 2 \cdot 2a\Delta x + 2^2 (\Delta x)^2 \right) \\ & + \left(a^2 + 2 \cdot 3a\Delta x + 3^2 (\Delta x)^2 \right) \\ & + \dots \\ & \left. + \left(a^2 + 2 \cdot (n-1)a\Delta x + (n-1)^2 (\Delta x)^2 \right) \right) \\ & = \frac{1}{3} (b^3 - a^3) \quad (2) \end{aligned}$$
